

MINNESOTA DHS – MSOP MOOSE LAKE
MOOSE LAKE, MN

Minnesota’s Department of Human Services (DHS) required a significant addition to the Minnesota Sex Offender Program (MSOP) facility in Moose Lake. We provided design services for both Phase I and Phase II of the project, which increased the capacity of the facility from 150 beds to 950 beds and consolidates MSOP’s treatment program to a single campus.

This consolidation eliminated the need to transfer high-risk patients between 3 campuses and promotes consistency, efficiency, and effectiveness of programs. This enables the program to incorporate a more cost-effective residential building model.

The first phase included schematic design for a long-range plan which provides centralized dining for the 50-bed facility. The second phase included design development, construction documents, construction review and observation for phase one construction. Phase I foodservice supports the 550-bed facility with decentralized tray service.

Opening Date: May 2012
Equipment Cost: \$1,336,000

[Scope](#)

Master Plan
New Kitchen

The foodservice portion of this project was constructed in two phases. Due to the difficulty of adding space too much of the foodservice area, the intent is that the hot food production cold prep and warewashing areas be sized to accommodate the long-range population on campus. The other areas including dry storage, walk-in freezer, walk-in refrigeration, offices, and employee spaces were designed to accommodate expansion in Phase II.
